```java
import java.util.Scanner;

public class Ordena {

    public static void main(String[] args) {
        int c, d, u, x, num;
        Scanner leia = new Scanner(System.in);
        System.out.print("Informe um número-> ");
        num = leia.nextInt();
        c=num/100;
        d=num%100/10;
        u=num%10;
        if (c>d || c>u)
        {
            if (d<u)
            {
                x=c;
                c=d;
                d=x;
            }
            else
            {
                x=c;
                c=u;
                u=x;
            }
        }
        if (d>u)
        {
            x=d;
            d=u;
            u=x;
        }
        System.out.println(c+" "+d+" "+u);

    }

}
```
